

Molecular Function

***		***				RNA binding
***		***				nucleic acid binding
***		***				structural constituent of ribosome
***		***				structural molecule activity
***		***				mRNA binding
***		***		*		3-hydroxyacyl-CoA dehydrogenase activity
***		***				TBP-class protein binding
***		***				catalytic activity, acting on RNA
***		**				aminoacyl-tRNA ligase activity
***		**				ligase activity, forming carbon-oxygen bonds
***		**				mRNA 3'-UTR binding
***		**				translation factor activity, RNA binding
***		**				NADH dehydrogenase activity
***		**				NADH dehydrogenase (quinone) activity
***		**				NADH dehydrogenase (ubiquinone) activity
***		*				oxidoreductase activity, acting on NAD(P)H, quinone or similar compound as acceptor
***		*				oxidoreductase activity, acting on NAD(P)H
***		*				oxidoreductase activity, acting on a heme group of donors
***		**				cytochrome-c oxidase activity
***		*				ligase activity
***						single-stranded RNA binding
***						translation initiation factor binding
***		*				ribonucleoprotein complex binding
***						translation initiation factor activity
***						oxidoreductase activity
*		***		**		oxidoreductase activity, acting on the CH-OH group of donors, NAD or NADP as acceptor
		***				adenyl ribonucleotide binding
		***				adenyl nucleotide binding
	***				***	extracellular matrix structural constituent
	***					cell adhesion molecule binding
	***					signaling receptor binding
					***	hexosyltransferase activity
					***	UDP-glycosyltransferase activity
			*		***	cytoskeletal motor activity
			*		***	microtubule motor activity
			*		***	polypeptide N-acetylgalactosaminyltransferase activity
					***	minus-end-directed microtubule motor activity
					***	heparan sulfate N-acetylglucosaminyltransferase activity
					***	glycosyltransferase activity
					***	acetylgalactosaminyltransferase activity
